

Reliable automated emergency response with Aiphone and Alertus Mass Notification System

KEY FEATURES

- ✓ Immediate activation
- ✓ Intelligent control
- ✓ Emergency alerting
- ✓ Simple integration
- ✓ Scalability

Broadcast Alertus text-to-speech messages through Aiphone emergency towers, wall boxes, and IP intercoms for full indoor/outdoor campus coverage. Activate and cancel alerts directly from the Alertus Server.

Trigger Alertus endpoints automatically with Aiphone emergency stations. Inform users with Alertus Notification Services through Alertus Mobile Apps, Desktop™ Notification, and SIP Annunciator.

With Alertus Custom Event Triggers, you can set intelligent rules to take different actions under different conditions. Customize your

automated action routines by the time and day of the week, emergency zone, weather conditions, and priority level.

Integration is configured centrally on an Aiphone answering station, allowing the entire intercom system to connect with the mass notification system without the need for additional cabling to individual devices.

With unlimited scalability, your Aiphone deployment can consist of a few, dozen, or even hundreds of endpoints. Easily create paging zones as you grow for granular reach.

ALERTUS TEXT-TO-SPEECH TECHNOLOGY WITH AIPHONE ANSWERING STATIONS

In an emergency, you need clear, calm, and consistent communication. Prerecorded messages can’t provide specific details and instructions, and a live voice requires extraordinary poise to speak calmly and clearly into a microphone during an emergency. Alertus’ text-to-speech (TTS) technology overcomes these challenges by leveraging the latest voice synthesis technology. Alertus TTS technology communicates directly with the Alertus Server over IP to deliver clear voice output of critical emergency alert messages. TTS messages are processed locally, independent from cloud services or off-site servers, to eliminate potential failure points.

Additional Notes:

- Requires at least one answering station per deployment.
- Up to three paging zones per Aiphone answering station or Alertus IP TTS interface.
- Duress button functionality requires an Alert beacon, IP relay, or Alertus IP TTS interface.
- Paging functionality requires an Alertus IP TTS interface and an option cable (Aiphone)

Method	Mass Notification
Compatibility	IX IXG Series stations and AC Nio™ (see all available at aiphone.com)
