

Integration with Cisco Unified Communications Manager provides clearer communication, faster call routing, and stronger control across your network.

KEY FEATURES

- ✓ **Communicate with intercoms from IP telephones**
- ✓ **Unlock doors with dial pad or soft buttons**
- ✓ **Manage call and hunt groups**
- ✓ **Transfer calls between Aiphone intercoms and Cisco extensions**

Integration of Aiphone's IX|IXG Series and Cisco Unified Communications Manager (CUCM) brings advanced IP video intercom functionality into your communications infrastructure.

By registering IX|IXG Series intercoms to CUCM, organizations create a centralized SIP communication system that enhances operational efficiency and real-time situational awareness. SIP calling, door release, and call transfer are all supported features.

Intercom calls can be answered from any compatible SIP device; video gets displayed on supported endpoints to monitor activity happening at the door. Calls can also be initiated back to Aiphone intercoms. This two-way communication provides clear voice and video for a more responsive and cohesive security ecosystem.

Doors can be remotely unlocked from Cisco endpoints during intercom calls. With call transfer, intercom calls can easily be redirected to other intercoms or Cisco extensions.
