

JOW-2D

Two-Door Station Adaptor

The JOW-2D is an adaptor for the JO Series video intercom system. It allows two video door stations to be used in a standard or app-enabled system. The first door station can be the JO-DA, JO-DV, or JO-DVF, but the second door station should be the JO-DV since it is sold separately.

The adaptor has inputs for two video door stations. It also has outputs to control door release for each of those door stations. When a visitor is granted entry, the door release button only activates the electric lock at the associated door. If one door station is in use, the call button on the other door station will not activate a call-in.

- Allows a second door station to be connected to any JO Series system
- Can expand existing systems or used in new installations
- Includes normally open contacts to activate a strike for unlocking the door

Power Source Supplied by the answering station or expansion station

Power Draw 100mA max, 18mA standby

Relay Outputs 24V DC, 1A (JO-1MDW)
24V DC, 500mA (JO-1MD, JO-1FD)

Operating Temp 32° ~ 104° F (0° ~ 40°C)

Dimensions 4-1/4" H x 4-13/16" W x 2-3/8" D
