Thank you for selecting Aiphone for your communication needs. Please read this manual carefully before installation, and keep it in a safe place for future reference.

Please note that images and illustrations depicted in this manual may differ from the actual product.
Introduction

- The NIM system is a communication system designed for applications in facilities such as hospitals, office buildings, factories, schools, and prisons. Various types of equipment enable you to configure a system that meets your needs for not only general purpose internal communications, but also for calling and communication in health care or various commercial applications. This system also allows you to check the call history by connecting a PC installed with the specified application software.
- The NIM system is telecommunication equipment, not to be used as Medical Equipment.

Precautions

Prohibited  Do not dismantle unit  Keep unit away from water  Be sure to follow the instruction

⚠️ WARNING

Negligence could result in death or serious injury.

1. Do not dismantle or alter the unit. Fire or electric shock could result.
2. Keep the unit away from water or any other liquid. Fire or electric shock could result.
3. High voltage is present internally. Do not open the case. Electric shock could result.
4. For power supply, use Aiphone power supply model specified for use with system. If non-specified product is used, fire or malfunction could result.
5. Do not connect any non-specified power source to the +, - terminals. Also, do not install two power supplies in parallel to a single input. Fire or damage to the unit could result.
6. Do not connect any terminal on the unit to an AC power line. Fire or electric shock could result.
7. Keep AC cord from being marred or crushed. If the AC cord is damaged, fire or electric shock could result.
8. Do not plug or unplug unit with wet hands. Electric shock could result.
9. Insert AC plug completely and securely into AC outlet. Otherwise, fire or electric shock could result.
10. Periodically check for and remove dust on the power plug. If dust is left, it could cause the power plug to heat up, resulting in fire.
11. Do not put any metal or flammable material into the unit through the openings. Fire, electric shock, or unit trouble could result.

⚠️ CAUTION

Negligence could result in injury to people or damage to property.

1. Do not install or make any wire terminations while power supply is plugged in. It can cause electrical shock or damage to the unit.
2. When mounting the unit on a wall, install the unit in a convenient location, but not where it could be jarred or bumped. Injury could result.
3. Before turning on power, make sure wires are not crossed or shorted. If not, fire or electric shock could result.
4. Do not place or install the unit in the locations subject to frequent vibration or impact. If the unit falls, injury to people or damage to the unit could result.
5. Do not put anything on the unit or cover the unit with cloth, etc. Fire or unit trouble could result.
6. Do not install the unit in any of the following locations. Fire, electric shock, or unit trouble could result.
   * Places under direct sunlight or near heating equipment that varies in temperature.
   * Places subject to dust, oil, chemicals, hydrogen sulfide (hot spring).
   * Places subject to moisture and humidity extremes, such as bathrooms, cellars, greenhouses, etc.
   * Places where the temperature is quite low, such as inside a refrigerated area or in front of an air conditioner.
   * Places subject to steam or smoke (near heating or cooking surfaces).
   * Where noise generating devices such as dimmer switches or inverter electrical appliances are closely.
   * Locations subject to frequent vibration or impact.
   * Locations subject to extremely powerful electrical fields.
7. Be sure to perform a call test or check the chime volume with the handset on the hook. If you operate the hook switch with the handset on your ear, a sudden call etc. may cause damage to your ear.
8. The unit must be installed and wired by a qualified technician.

GENERAL PRECAUTIONS

1. Keep the unit more than 1 m (3.3') away from radio or TV sets.
2. Keep the intercom wires more than 30cm (12'') away from AC 100-240V wiring. AC induced noise and/or unit malfunction could result.
3. Comply with all third party manufacturing specifications that will be used with this system.
4. If it is used close to a cellular phone, the unit may malfunction.
5. The unit can be damaged if dropped. Handle with care.
6. The unit will not work during power failure.
7. In areas where broadcasting station antennas are close by, the intercom system may be affected by radio frequency interference.
8. All the units, except for Sub station, flush mount (NI-JA), are designed for indoor use only. Do not use at outdoor locations.
9. Environmental sound around the unit may hinder clear communication, but this is not a malfunction.
10. Using a mobile phone or professional-use radio equipment such as walkie-talkie close to the system may cause a malfunction.
NOTICES

- We will under no conditions be liable for damage that occurs due to the inability to communicate due to malfunctions, problems, or operational errors in this product.
- We will under no conditions be liable for any damages or losses resulting from this product's contents or specifications.
- This manual was created by Aiphone Co., Ltd., all rights reserved. Copying a part of or this entire manual without prior permission from Aiphone Co., Ltd. is strictly forbidden.
- Please note that images and illustrations depicted in this manual may differ from the actual ones.
- Please note that product specifications may be changed for the sake of improvement without prior notice.
- This system is not intended for life support or crime prevention. It is just a supplementary means of conveying information. Aiphone will under no conditions be liable for loss of life or property which occurs while the system is being operated.
**System requirements for PC**

Your PC must meet the following system requirements to use the NI-SOFT. Also refer to the instruction manual supplied with your PC.

<table>
<thead>
<tr>
<th>OS (English ver. only)</th>
<th>Windows 7 Home Premium/Professional/Ultimate (Service Pack 1, 32/64bit)</th>
<th>Windows 8.1/Pro (32/64bit)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Processor</td>
<td>2.7 GHz or higher</td>
<td></td>
</tr>
<tr>
<td>System memory (RAM)</td>
<td>2 GB RAM or higher</td>
<td></td>
</tr>
<tr>
<td>Hard disk</td>
<td>Total 100 MB or higher (*1)</td>
<td></td>
</tr>
<tr>
<td>Run-time</td>
<td>Microsoft® .NET Framework 4.5 (*2)</td>

</tr>
</tbody>
</table>

(*1): If the software is to be installed onto a drive other than C: drive, both the C: drive and the installation drive each require 50 MB or more of memory.

(*2): If the specified Run-time is not installed on the PC, it will be installed automatically when installing the NI-SOFT.

⚠️ The NI-SOFT may not run, or may not operate correctly (such as freezes occurring) on a PC with specifications below the necessary requirements.

- The NI-SOFT may not run, or may not operate correctly (such as freezes occurring) on a PC with specifications below the necessary requirements.
- We recommend using a PC and CD-ROM/DVD-ROM drive that exceed the basic system requirements.
- The PC should be operable 24 hours a day.
- Refer to the NI-SOFT operation manual included in the CD-ROM of the NI-SOFT for the setting method of the NI-SOFT.

Microsoft and Windows are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
The following is a system configuration example. You can select needed equipment to configure a system to meet your application needs.

**NOTE:** The above example may differ from actual product.
Maximum number of stations in a single system

The maximum number of sub stations differs depending on the master station model.

This section illustrates the mounting procedures for wall- and ceiling-mount equipment.

### Ceiling speaker (NI-LB)

1. Make a hole of 150mm (5-7/8") in diameter in the ceiling.
2. Disconnect the connector, and then make wire connections with other equipment.
3. Put the holder into the hole by tilting it, and then position it as shown.
4. Hang the loop on the hook at one side.
5. Connect the connector to the main unit.
6. Hang the loop on the hook at the other side, and install the main unit so that it is positioned at the center of the hole.

**NOTE:**
- Make sure to mount the ceiling microphone 50 cm (20") apart from the ceiling speaker to prevent audio feedback.
- Pay attention to the depth of the unit.
- Use board anchors or concrete plugs as needed on a concrete wall.

### Ceiling microphone (NI-SB)

2. Make wire connections with the other equipment.
3. Fasten the unit to the wall with the wood screws.

**Opening dimensions**
- W: 47mm (1-7/8")
- H: 38mm (1-1/2")
- D: 40mm (1-9/16")
Wall jack (NIR-HP, NIR-1, NIR-MB, NIR-7BS)
Call button (NIR-6)
Corridor light (NIR-4, NIR-4S)
Call reset button (NIR-2)

* The illustration shows the wall jack for NI-RC (NIR-HP).

Bathroom call button (NIR-7W, NIR-7HW)

* The illustration shows the bathroom call button (NIR-7W).

1. Remove the front cover from the main unit.
2. Install a single gang box in the wall. Pass the wires through the gang box and make the wire connections with the other equipment.
3. Fasten the unit to the single-gang box with the screws.
4. Attach the front cover to the main unit.

Opening dimensions without a gang box
W: 45mm (1-3/4"), H: 72mm (2-13/16"), D: 54mm (2-1/8"

Opening dimensions without a gang box
W: 50mm (1-15/16"), H: 70mm (2-3/4"), D: 20mm (13/16"

1. Remove the front cover from the main unit.
   Insert a flat head screwdriver into the hole on the bottom of the unit, and then pull the flat head screwdriver toward you. The front cover opens.
2. Install a single gang box in the wall. Pass the wires through the gang box and make the wire connections with the other equipment.
3. Fasten the unit to the single-gang box with the screws.
   * The screw holes are on the backside of gray rubber.
4. Attach the front cover to the main unit.
**Sub station, surface mount (NI-BA)**

* When mounting NI-BA on a wall, follow the procedure shown below.

1. **Install a single gang box in the wall.** Pass the wires through the gang box and make the wire connections with the other equipment.

2. **Fasten the mounting bracket to the gang box with the screws.**

3. **Attach the main unit to the mounting bracket.**

**When setting NI-BA on a desk**

- Attach the included 4 rubber feet on the back of NI-BA.
- Route the wires through the cable inlet at the upper or lower part of NI-BA.
- When routing the wires at the upper part, remove the cable inlet plate to allow passage of the wires.

**Opening dimensions without a gang box**

W: 90mm (3-9/16"), H: 73mm (2-7/8"), D: 54mm (2-1/8")

---

**Sub station, flush mount (NI-JA)**

1. **Install a 2 gang box in the wall.** Pass the wires through the gang box and make the wire connections with the terminal cover open.

2. **Fasten the main unit to the gang box with the special screws.**

**Opening dimensions without a gang box**

W: 90mm (3-9/16"), H: 73mm (2-7/8"), D: 54mm (2-1/8")
### Wall jack (NIR-HPF)

Corridor light (NIR-42, NIR-4BZ)

1. Remove the front cover from the main unit.

2. Install a 2-gang box in the wall. Pass the wires through the gang box and make the wire connections with the other equipment.

3. Fasten the unit to the 2-gang box with the screws.

4. Attach the front cover to the main unit.

---

### Corridor light with nameplate (NIR-31, NIR-32, NIR-34)

* The illustration shows the corridor light with nameplates, 4 names (NIR-34).

1. Install a gang box in the wall.
   - NIR-31, NIR-32: 2-gang box
   - NIR-34: 3-gang box
   - (*) Recommended

2. Detach the mounting bracket from the main unit by removing the room number plate and the screw.

3. Fasten the mounting bracket to the gang box with the screws.

4. Hang the string of the main unit on a projecting part or a thread on the bracket to suspend the main unit.

5. Make wire connections with other equipment.

6. Mount the main unit on the mounting bracket, and affix the main unit to the bracket with the screw.

7. Attach the room number plate to the main unit.
The following is an example of basic wiring diagram.

* The wiring methods differ depending on the equipment used. Refer to page 20 to 29 for details about various wiring methods.

**Connection wiring diagram (outline)**

- **Master station, 40-call (NIM-40B)**
  - **Master station, 20-call (NIM-20B)**
  - **Master station, 60-call**
  - **Master station, 80-call**

  (*) Special order product. N/A in North America.

- **Call extension speaker (IER-2)**
- **Speaker etc. (3W/20Ω, third party product)**
  - **SP-20N/A**

  (+): North America only

- **PC**
  - **RS232C cable** (included on NI-SOFT)

- **Power supply unit (IS-PU only)**

- **Bedside call switch (NIR-8)**
  - **(6 wall jacks can be connected in total.)**

- **Ceiling microphone (NI-SB)**

- **Corridor light, single bed (NIR-4)**
  - **Call reset button (NIR-2)**

- **Wall jack for NIR-8 (NIR-1)**

- **Wall jack with microphone for NIR-8 (NIR-MB)**

- **Bedside handheld sub station (NI-RC)**

- **Wall jack for NI-RC (NIR-HP)**

- **NIR-4**

- **NIR-2**

- **NIR-8**

- **NIR-HP**

- **NI-LB**

Refer to page 20 for details about various wiring methods.

Refer to page 21 for details about wiring to a master station.

Refer to page 22 for details and examples of using alternative equipment.

Refer to page 23 for details and examples of using alternative equipment.

Do not connect two power supplies in parallel.

When using the master station, 60-call or 80-call, two power supplies are needed.
**Wiring distance**

| Master station - sub station | Ø0.65mm (22 AWG) | Ø0.9mm (18 AWG) |
| Master station - power supply unit | Ø0.9mm (18 AWG) | 10m (33') |
| Master station - call extension speaker (IER-2), speaker etc. | Ø0.9mm (18 AWG) | 50m (165') |

**Master station terminal marking**

- **E**: Common line (for earth ground)
- **M**: Common line (for microphone)
- **1** - **10** - **11**: Individual channel line

**Meanings of symbols**

- **■**: Wire-to-wire connection
- **X**: The wire should be cut and insulated.

---

(*1): • The common line **E** and individual channel lines should be in the same sheath wiring.
• The remainder wires in the same sheath wiring should be connected to the common line **E** of the master station for noise prevention.
Handling cables

Notes about handling cables

* Cables and connectors are not included with the products.

■ Notes on cables
  - Use PE (polyethylene)-insulated PVC jacketed cable. Parallel or jacketed conductors, mid-capacitance, non-shielded cable is recommended.
  - Never use twisted pair cable or coaxial cable.

■ How to connect or disconnect stranded wires.
  - To ensure that the wire won't bend, press the release button while inserting into terminal.

[Images of stranded wire connections]

■ Note about wire-to-wire connection.
Make wire-to-wire connections securely as shown below.

[Images of wire-to-wire connections]
Connection wiring diagram (details)

Connecting to the master station

Procedure

1. Detach the terminal cover by removing the two screws.

2. Connect the wiring from the sub stations and power supply to the master station by inserting lead wires to the corresponding terminals. Using the cable tie is recommended for secure installation.

3. After the connections for the whole system have been completed, turn on the power switch.

4. Attach the terminal cover with the two screws.

Note about connecting a PC to the master station.

Use the included RS232C cable for the connection.

* Install NI-SOFT on the PC from the included CD-ROM. Refer to the instruction manual for NI-SOFT for details.

* When extending the RS232C cable, the distance between the master station and the PC should be 15m (50') or less.

CAUTION

Note about connecting the power supply unit(s) to the master station.

* When using the master station, 60-call or 80-call, two power supply units are needed.

Do not connect the two power supply units in parallel.
Multiple-user room examples of using the ceiling speaker (NI-LB) and the ceiling microphone (NI-SB)

When using a corridor light and reset button

- Corridor light, single bed (NIR-4)
- Corridor light with buzzer (NIR-4BZ)
- Corridor light with reset button (NIR-42)

* Refer to page 29, when using the corridor light with nameplate (NIR-31, NIR-32, NIR-34).

Cut the green lead wire and insulate its ends.

- When not using a corridor light, do not cut the green lead wire, and insulate the blue lead wire.

Do not cut.

Meanings of symbols
- : Wire-to-wire connection
- : The wire should be cut and insulated.

- Green lead wire

- Wall jack for NIR-8 (NIR-1)
- Bedside call switch (NIR-8)
- Call button (NIR-6)

Individual channel line 1, 2, 3, etc.

Master station

Call reset button (NIR-2)
Multiple-user room examples of using the ceiling speaker (NI-LB) and not using the ceiling microphone (NI-SB)

When using a corridor light and reset button

- Corridor light, single bed (NIR-4)
- Corridor light with buzzer (NIR-4BZ)
- Corridor light with reset button (NIR-42)

Cut the green lead wire and insulate its ends.

* Refer to page 29, when using the corridor light with nameplate (NIR-31, NIR-32, NIR-34).

Meanings of symbols
- ▪: Wire-to-wire connection
- ◯: The wire should be cut and insulated.

Individual channel line 1, 2, 3, etc.

Master station

Ceiling speaker (NI-LB)

Wall jack with microphone for NIR-8 (NIR-MB)

Bedside call switch (NIR-8)

(6 wall jacks with microphone can be connected in total.)

Green lead wire

* When not using a corridor light, do not cut the green lead wire, and insulate the blue lead wire.

Do not cut.
Multiple-user room examples of using the bedside handheld sub stations (NI-RC) etc.

Means of symbols
- : Wire-to-wire connection
× : The wire should be cut and insulated.

When using a corridor light;
Cut the connection between the black and green wires to separate them, and insulate the green wire.

When using the corridor light, multiple beds (NIR-4S) and call reset button (NIR-2)

When using a corridor light;
Cut the connection between the black and green wires to separate them, and insulate the green wire.
**When using equipment without microphone (no communication is possible)**

Master station

- Individual channel line 1, 2, 3, etc.
- Call latching wall jack for NIR-8 (NIR-7BS)
- Bedside call switch (NIR-8)

*1: When using a corridor light; Cut the connection between the black and green wires to separate them, and insulate the green and orange lead wire.

*2: The orange lead wire should be insulated.

**When not using a corridor light**

Master station

- Individual channel line 1, 2, 3, etc.
- NIR-HP

*3: When not using a corridor light; Do not cut the connection between the black and green wires. Insulate the blue lead wire.

*4: The blue lead wire should be insulated.
Examples of using the bathroom call buttons (NIR-7W or NIR-7HW)

When using a corridor light and reset button

Master station

Individual channel line 1, 2, 3, etc.

Bathroom call button with pull cord (NIR-7HW)

Bathroom call button (NIR-7W)

Corridor light, single bed (NIR-4)

Corridor light with buzzer (NIR-4BZ)

Corridor light with reset button (NIR-42)

Call reset button (NIR-2)

When not using a corridor light

Master station

Individual channel line 1, 2, 3, etc.

NIR-7W

NIR-7W

■ Meanings of symbols

○: Wire-to-wire connection

×: The wire should be cut and insulated.

(*)1: When using a corridor light;
Cut the connection between the black and green wires to separate them, and insulate the green wire.

(*)2: When not using a corridor light;
Do not cut the connection between the black and green wires. Insulate the blue lead wire.

(*)3: The blue lead wire should be insulated.

* Refer to page 29, when using the corridor light with nameplate (NIR-31, NIR-32, NIR-34).

* Up to 3 bathroom call buttons can be connected to a single channel line.
Single room examples of using the surface mount sub station (NI-BA)

When using a corridor light and reset button

- **Master station**
- **Individual channel line** 1, 2, 3, etc.

- **Sub station, surface mount (NI-BA)**

- **Corridor light, single bed (NIR-4)**
- **Corridor light with buzzer (NIR-4BZ)**
- **Corridor light with reset button (NIR-42)**

- **Call reset button (NIR-2)**

- **Wall jack for NIR-8 (NIR-1)**

- **Call button (NIR-6)**

- **Bedside call switch (NIR-8)**

- **Meanings of symbols**
  - ●: Wire-to-wire connection

- **(*)1**: Remove the lead wire between the CE and CS terminals. The CS terminal is not used.

* Refer to page 29, when using the corridor light with nameplate (NIR-31, NIR-32, NIR-34).

When not using a corridor light

- **Sub station, surface mount (NI-BA)**

- **Call button (NIR-6)**

- **Bedside call switch (NIR-8)**

- **(*)2**: Do not remove the lead wire between the CE and CS terminals. The C terminal is not used.
Examples of using the flush mount sub station (NI-JA)

**When using a corridor light and reset button**

- **Master station**

  - Individual channel line 1, 2, 3, etc.

- **Sub station, flush mount (NI-JA)**

  - Corridor light, single bed (NIR-4)
  - Corridor light with buzzer (NIR-4BZ)
  - Corridor light with reset button (NIR-42)

- **Call reset button (NIR-2)**

- **Meanings of symbols**
  - ●: Wire-to-wire connection

- **(*1): Remove the lead wire between the CE and CS terminals. The CS terminal is not used.**

- **(*2): Do not remove the lead wire between the CE and CS terminals. The C terminal is not used.**
Notes about connecting to a corridor light with nameplate (NIR-31, NIR-32, NIR-34)

The individual user displays and the corresponding lead wire colors are as follows. When the call button of a sub station connected to one of the color-coded lead wires of the corridor light is pressed, the corresponding number of the call indicator lights.

- Wire-to-wire connection

*(1)*: When using a corridor light; Cut the connection between the black and green wires to separate them, and insulate the green wire.
SETUP AFTER INSTALLATION

Adjusting volume and ringtone settings

For these changes, use the switches and control knobs under the switch cover by removing the cover.

Adjusting volume

To adjust:
Turn the control knob clockwise to increase and counterclockwise to decrease the volume.

Decrease  Increase

Changing the sound type of ringtone
You can change the sound type of ringtone between melody and chime.

ON: Melody
OFF: Chime

To select melody, put switch 5 in UP position.
To select chime, put switch 5 in DOWN position.

Activating/deactivating the automatic volume gain of ringtone
When this function is active, the volume of ringtone increases automatically to the maximum level (low→mid→high) in a 90-second interval.

ON: Disable
OFF: Enable

To disable, put switch 6 in UP position.
To enable, put switch 6 in DOWN position.

* Do not change these switches. They have been preset in the optimum positions.

NOTE: After modifying the settings, press the reset button to apply new settings.

TALK:
This adjusts the volume of audio (sent from the master station) heard at the sub stations.

PRETONE:
This adjusts the volume of notice sound heard at the sub stations.

ALL CALL:
This adjusts the volume of all station paging heard at the sub stations.

RECEIVE:
This adjusts the master receive volume. As the basis of this level, you can adjust the receiving volume with the RECEIVE VOL. tab on the master station operation panel.

RING TONE:
This adjusts the master volume of ringtone. As the basis of this level, you can adjust the ringtone volume with the RING TONE VOL. tab on the master station operation panel.
# Troubleshooting

If the system fails to operate normally, check the following points to determine whether the fault can be corrected by the simple measures suggested. If it cannot be corrected, or if the fault is not listed in the “Symptom” column, disconnect the power cord and contact the system supplier or service center for help.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause</th>
<th>Solution</th>
</tr>

- M: Common line (for microphone)
- E: Common line (for earth ground)
Warranty

Aiphone warrants its products to be free from defects of material and workmanship under normal use and service for a period of one year after delivery to the ultimate user and will repair free of charge or replace at no charge, should it become defective upon which examination shall disclose to be defective and under warranty. Aiphone reserves unto itself the sole right to make the final decision whether there is a defect in materials and/or workmanship; and whether or not the product is within the warranty. This warranty shall not apply to any Aiphone product which has been subject to misuse, neglect, accident, power surge, or to use in violation of instructions furnished, nor extended to units which have been repaired or altered outside of the factory. This warranty does not cover batteries or damage caused by batteries used in connection with the unit. This warranty covers bench repairs only, and any repairs must be made at the shop or place designated in writing by Aiphone. This warranty is limited to the standard specifications listed in the operation manual. This warranty does not cover any supplementary function of a third party product that is added by users or suppliers. Please note that any damage or other issues caused by failure of function or interconnection with Aiphone products is also not covered by this warranty. Aiphone will not be responsible for any costs incurred involving on site service calls. Aiphone will not provide compensation for any loss or damage incurred by the breakdown or malfunction of its products during use, or for any consequent inconvenience or losses that may result.

The object area of European Union is the EU.

FCC
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off on and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
