The RY-ES is a relay used to activate an external signaling device when the door station calls in. It can be used for call extension on the JP, JO, JK, JF, KB, AX, NIM, DB, and IE systems (excluding IE-8MD). The relay connects to the chime output of the master station in place of the IER-2. The RY-ES relay will share power with the master station.

1 NAMES & FUNCTIONS

Input of relay:
- Red: Positive Power
- Black: Negative Power
- White: Activation wire
- Blue: Activation wire

Output of relay:
- 2 Orange wires
- N/O Dry contact closure

2 INSTALLATION

Wall mount the unit with the supplied mounting hardware as shown in the diagram to the left. When making wire connections, be sure not to short any wires together. Use wire nuts or another protective material to isolate the connections.
Connect the RY-ES relay to either the JO-1MD master station or the JO-1FD expansion station. Do not connect the same relay to both stations.

The RY-ES will work with the IE-1GD, IE-2AD, and IE-1AD. Connections for the IE-1GD and IE-2AD are shown above. When using the IE-1AD, connect the white/blue wires of the RY-ES to the white leads of the unit.

The RY-ES is NOT compatible with the IE-8MD.

4 SPECIFICATIONS

Power Source: 12-30V DC, 12-16V AC. Power supplied by master.
Current consumption:
DC: Standby 10mA. Max 60mA
AC: Standby 15mA. Max 70mA
Contact rating:
125V AC 1.0A
30V DC 1.0A
