

Aiphone and Software House C•CURE® 9000 combine communication, access control, and VMS systems.

KEY FEATURES

- ✓ Actions can be triggered
- ✓ Event logging
- ✓ Controls intercoms via popup

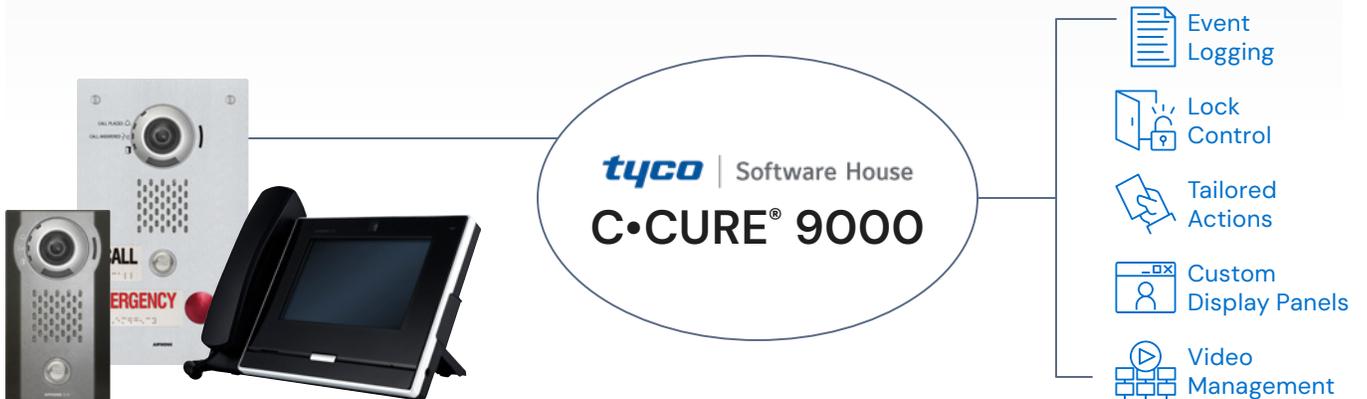

Introducing the seamless integration between Aiphone IX|IXG Series and C•CURE 9000. This collaboration enables organizations to harness the capabilities of an advanced IP video intercom system, fostering a more efficient, cohesive, and responsive security ecosystem.

The IX|IXG Series integrates smoothly with the C•CURE 9000 platform, enabling direct communication of intercom events for enhanced security management. Intercom events can automatically trigger actions within C•CURE 9000, such as unlocking doors, activating alarms, or calling up

surveillance cameras. These events are also logged within the C•CURE 9000 system for complete visibility and auditing.

This integration provides users with a centralized and intuitive interface to monitor and manage intercom activity alongside access control and video surveillance. By consolidating critical functions into a single platform, users benefit from faster response times, improved situational awareness, and simplified system operation leading to increased security and operational efficiency.

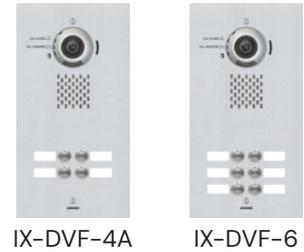

SUPPORTED DEVICES

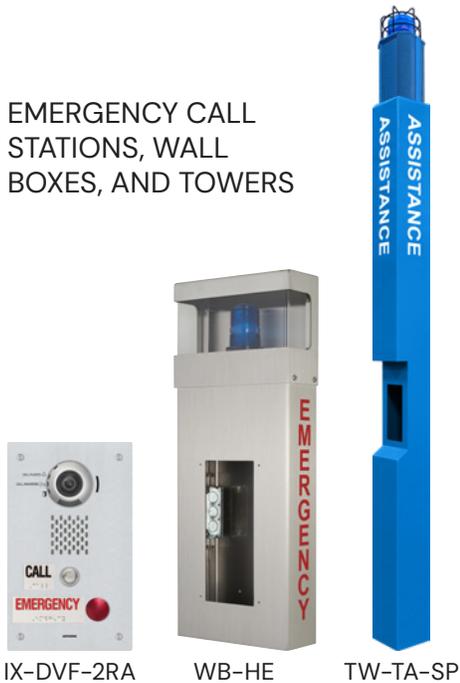

SINGLE DESTINATION CALL STATIONS

SELECTIVE CALL STATIONS

EMERGENCY CALL STATIONS, WALL BOXES, AND TOWERS

ANSWERING STATIONS
